

Auto Ticket Classification using Flow Designer

Phase 1 – Project Planning Phase

ServiceNow – School IT Helpdesk Automation

Phase Overview

The project is planned to automate the classification of IT support tickets received by a school helpdesk. Students and teachers may report issues such as Wi-Fi problems, projector failures, password/login problems, and slow computers. The existing manual process requires IT staff to review every request and select the appropriate category and subcategory. This project aims to reduce that manual effort through ServiceNow Flow Designer.

Activities / Tasks

- Define the project scope and purpose.
- Identify the school IT helpdesk ticket-classification problem.
- Plan an automated, no-code solution using ServiceNow Flow Designer.
- Define the main ticket categories and subcategories.
- Plan automated email confirmation to the caller.
- Prepare a phased implementation approach covering configuration, automation, testing, documentation, and demonstration.

Key Project Details

Detail	Project Information
Platform	ServiceNow
Automation	Flow Designer
Main data	Incident Workflow custom table
Primary users	Students, Teachers, IT Helpdesk Staff

Project outcome for this phase: This phase contributes to the complete ServiceNow solution for automatic school IT ticket classification using Flow Designer.
