

Auto Ticket Classification using Flow Designer

Phase 2 – Brainstorming & Ideation Phase

ServiceNow – School IT Helpdesk Automation

Phase Overview

During the ideation phase, the team identifies common helpdesk issues and converts them into simple classification rules. The central idea is to analyze the ticket Short Description and automatically determine the appropriate Category and Subcategory. The solution is intentionally designed as a no-code Flow Designer implementation so that the rules can be maintained easily.

Activities / Tasks

- List common school IT support issues.
- Group similar issues into meaningful categories.
- Define keyword-based rules for classification.
- Decide how Category and Subcategory should depend on each other.
- Plan the email acknowledgement after ticket creation.
- Choose Flow Designer rather than complex scripting or machine learning for the initial solution.

Key Project Details

Detail	Project Information
WiFi / Network	Network → Wi-Fi
Projector	Hardware → Projector
Password / Login	Access → Forgot Password
Slow / Hanging	Performance → Slow Computer

Project outcome for this phase: This phase contributes to the complete ServiceNow solution for automatic school IT ticket classification using Flow Designer.
