

Auto Ticket Classification using Flow Designer

Phase 3 – Requirement Analysis Phase

ServiceNow – School IT Helpdesk Automation

Phase Overview

The requirement analysis identifies what the system must capture, automate, and validate. The project requires structured ticket information, dependent choices, automatic classification, and an email notification to the caller.

Activities / Tasks

- Automatically classify IT tickets from the issue description.
- Assign both Category and Subcategory without manual intervention.
- Support dependent choice logic between Category and Subcategory.
- Send an automated email notification when a ticket is created.
- Store ticket information in a structured format.
- Provide an easily maintainable and scalable configuration.
- Validate mandatory fields, auto-numbering, category/subcategory values, and reference fields.
