

Auto Ticket Classification using Flow Designer

Phase 4 – Project Design Phase

ServiceNow – School IT Helpdesk Automation

Phase Overview

The design phase defines the ServiceNow data structure, field relationships, and automation flow before implementation. A custom table named Incident Workflow is used to store ticket records. Category and Subcategory are designed as dependent choice fields so that subcategory values are controlled by the selected category.

Activities / Tasks

- Create the Incident Workflow custom table.
- Enable auto-numbering for ticket records.
- Design all required fields and their data types.
- Configure Category, Subcategory, and State as choice fields.
- Configure Subcategory to depend on Category.
- Design the Flow Designer logic for keyword-based classification.
- Design the email confirmation step.

Key Project Details

Detail	Project Information
Category: Network	Subcategory: Wi-Fi
Category: Hardware	Subcategory: Projector
Category: Access	Subcategory: Forgot Password
Category: Performance	Subcategory: Slow Computer

Project outcome for this phase: This phase contributes to the complete ServiceNow solution for automatic school IT ticket classification using Flow Designer.
