

Auto Ticket Classification using Flow Designer

Phase 5 – Project Development Phase

ServiceNow – School IT Helpdesk Automation

Phase Overview

The development phase implements the planned configuration in ServiceNow. The custom table and fields are created first, followed by dependent choices and the Flow Designer automation. The flow is triggered when a record is created and the Category is empty.

Activities / Tasks

- Create the Incident Workflow table under System Definition → Tables.
- Enable auto-numbering in the table controls.
- Create Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, and Assigned to fields.
- Add the required choices.
- Configure Subcategory as dependent on Category.
- Create the Flow Designer flow named Auto Classify School IT Tickets.
- Use Record Created as the trigger with Category is Empty.
- Add If / Else If branches for Wi-Fi, Projector, Password/Login, and Slow/Hanging issues.
- Use Update Record actions to set Category and Subcategory.
- Add Send Email action to notify the caller.
- Activate the flow after configuration.

Key Project Details

Detail	Project Information
Wi-Fi/Network keywords	Network / Wi-Fi
Projector keyword	Hardware / Projector
Password or Login	Access / Forgot Password
Slow or Hanging	Performance / Slow Computer

Project outcome for this phase: This phase contributes to the complete ServiceNow solution for automatic school IT ticket classification using Flow Designer.
