

Auto Ticket Classification using Flow Designer

Phase 6 – Project Testing Phase

Phase Overview

Testing validates the end-to-end workflow from ticket creation through automatic classification and email notification. The project documentation includes test scenarios for Wi-Fi and projector issues and checks whether the expected Category, Subcategory, and email are produced.

Activities / Tasks

- Verify that required fields are captured correctly.
- Verify that ticket numbers are generated without duplication.
- Verify that Category and Subcategory are stored accurately.
- Verify that reference fields resolve correctly.
- Test a Wi-Fi issue such as 'WiFi not working in library'.
- Confirm Network and Wi-Fi are assigned automatically.
- Test a projector issue such as 'Projector not turning on'.
- Confirm Hardware and Projector are assigned automatically.
- Check the email log and preview the confirmation email.
- Confirm the flow works after the form is reloaded.

Key Project Details

Detail	Project Information
Test 1: WiFi not working in library	Network / Wi-Fi
Test 2: Projector not turning on	Hardware / Projector
Email verification through System Logs	Emails

Project outcome for this phase: This phase contributes to the complete ServiceNow solution for automatic school IT ticket classification using Flow Designer.
