

Auto Ticket Classification using Flow Designer

Phase 8 – Project Demonstration Phase

ServiceNow – School IT Helpdesk Automation

Phase Overview

The demonstration phase presents the complete working flow to a reviewer or evaluator. The demonstration should show how a user creates a ticket and how ServiceNow automatically classifies the ticket and sends a confirmation email. The final presentation should also explain the configuration and deployment process.

Activities / Tasks

- Introduce the problem faced by the school IT helpdesk.
- Explain the project objective and no-code approach.
- Show the Incident Workflow table and important fields.
- Demonstrate dependent Category and Subcategory choices.
- Open the Auto Classify School IT Tickets flow.
- Create a sample Wi-Fi ticket and show automatic classification.
- Create a sample projector ticket and show automatic classification.
- Show the email notification generated for the caller.
- Explain testing and validation.
- Show the completed Update Set and XML export as the deployment artifact.
- Conclude with future extensions such as assignment automation, SLA tracking, or predictive intelligence.

Key Project Details

Detail	Project Information
Final flow: Ticket Creation	Flow Trigger → Keyword Condition → Update Record → Email Notification
Demonstration outcome	consistent ticket classification with reduced manual effort.

Project outcome for this phase: This phase contributes to the complete ServiceNow solution for automatic school IT ticket classification using Flow Designer.
